

Basic human comfort is a foundation of responsible design, and an essential key to comfort is air quality. Polluted air has the potential to cause a variety of health complaints. On the opposite end of the spectrum, clean indoor air helps improve physical well-being and enhances productivity in the work environment.

- GREENGUARD is an indoor air quality certification program for low emitting products.
- GREENGUARD evaluates over 75,000 chemicals, including volatile organic compounds, carcinogens and reproductive toxins.
- GREENGUARD tests on a quarterly basis to ensure continual compliance with their stringent standards.
- GREENGUARD certification is a requirement reference in the Leadership for Energy and Environmental Design (LEED) for commercial rating systems.
- GREENGUARD children & school certification establishes extremely strict chemical emissions standards to address the special needs and sensitivity of children in educational and daycare facilities.

For more details on GREENGUARD's certification process go to www.greenguard.org.
